

TUMBLING TECHNOLOGY

With all our activities we combine extra requirements on quality: first-class material, innovative technology and a solid production. Premium quality – the very fine different! Behind of that there are people who achieve the best with responsibility and passion. For your satisfaction, for your success!

GPS 5000-10000 K INDUSTRIAL TUMBLER

- More efficient utilisation of drum capacity, than in other tumblers.
- GPS tumblers can be filled in one go with the door open, via loader, conveyor, screw etc. or can be filled with the door closed using our vacuum loader.
- Discharging is much faster and safer, using the tilting possibilities.
- More hygienic, due to easier cleaning
- Wide drum.
- Asymmetric baffles allow different massaging possibilities.
- Intensive cooling of the meat (if K-type) possible using glycol brine inside the double skinned drum and insulated jacket.
- MC₂R touch screen with monitor
- 99 free programmes for processing cooked and raw products.
- The MC₂R control offers an easy handling of settings, comfortable process control, administration and documentation of flow process, numerous diagnosis tools, remote maintenance
- All parameter of process are controllable and programmable, for example: lead time, operation time and resting time, vacuum, temperature, angle of inclination, speed, selectable sense of rotation.
- Specialty: the end of production required is free selectable and adjustable in advance, that means no preparation concerning start of production, time of exposure etc. necessary.

Innovative tumbling technology - made in germany
