

KICAB's Sludge press SBPK

Effective Dewatering System

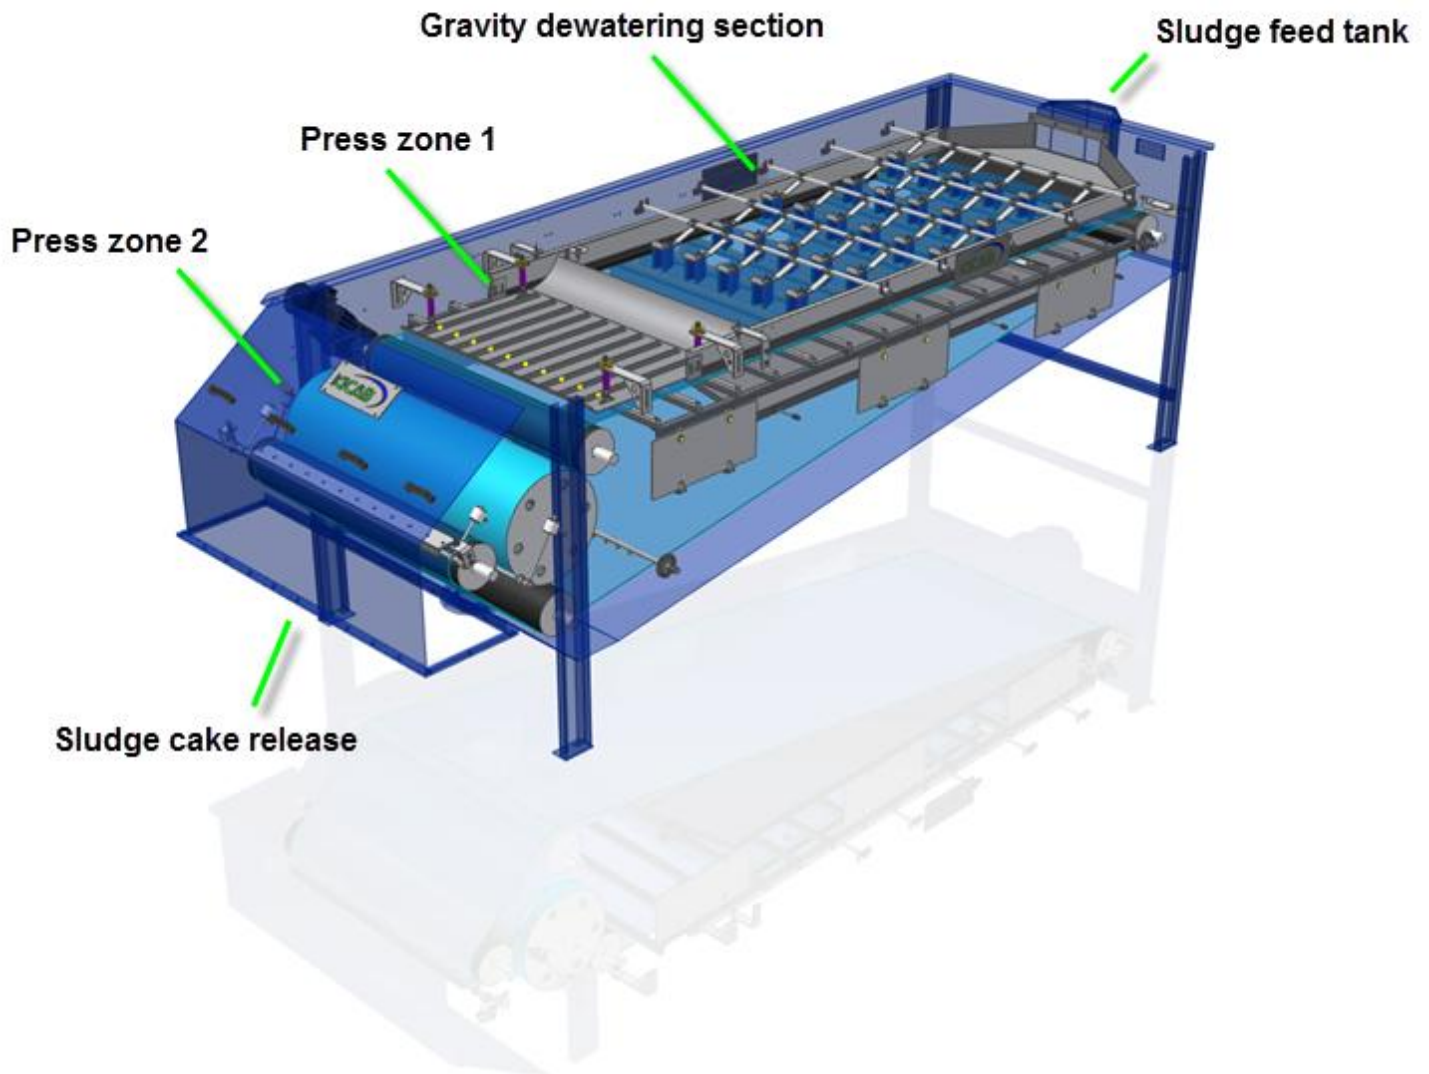

SBPK is a powerful wastewater treatment system able to treat many types of industrial wastewater or sludge in one single operation unit.

The SBPK was designed for low maintenance cost and as such: does not vibrate and has a low polymer consumption.

- Low operational costs (flocculent, energy, water)
- Closed low-odour design
- High dry solids contents, thus low disposal costs
- Low manpower requirement
- Small footprint, thus low building costs
- Low maintenance costs
- Low requirement of spare and wearing parts

-The suspension is spread over the horizontal pre-dewatering section. Major part of the filtrate drains off by gravity.
