

## Pelt-O-Matic™ Automated Pelt Removal System

- For Sheep, Lambs, Goats, Calves and Deer

### DESCRIPTION

The Pelt-O-Matic™ system is designed for automated pelt removal from a variety of species including: Sheep, Lambs, Goats, Calves and Deer.

### WORKING PROCESS

How the Pelt-O-Matic™ works:

- The carcass has minimal work-up for either conventional or inverted dressing.
- The free end of the pelt is placed between the arms of the Pelt-O-Matic™.
- Only one operator is required.
- The pelt is removed automatically with a slow and steady downward pull greatly reducing the risk of grain strain, blood spotting and selvedge damage.
- This is achieved without slowing or stopping the chain, at any chain speed.
- The Pelt-O-Matic™ automatically drops the pelt into a chute.
- The carcass is then eviscerated as normal

### ADVANTAGES

- Proven payback within 12 months
- Reduced Labour
- Premium prices for pelts/skins
- Improved yields and carcass presentation
- Reduced injury claims (OH&S concerns)

### MACHINE ADVANTAGES

Features of the Pelt-O-Matic™

- Simple to operate
- Can be used with conventional or inverted dressing
- Can be customised to fit all chain speeds
- Compact design fits most existing kill floors
- Robust, stainless steel construction

### MACHINE CAPACITY

Pelt-O-Matic™ Sizes include:

- Single Head - processes up to 2/min [120/hr]
- 6 Head - processes up to 8/min [480/hr]
- 8 Head - processes up to 12/min [720/hr]
- 10 Head - processes up to 17/min [1000/hr]

### INSTALLATIONS

Pelt-O-Matic™ systems are installed at Domestic Plants and Export Plants including EU & USDA Listed

#### Australian Installations

NSW	1 x 8 Head
VIC	3 x 6 Head & 1 x 10 head.
WA	1 x 8 Head & 1 x Single Head.
TAS	1 x 6 Head
QLD	1 x Single Head

#### Overseas Installations

USA	1 x 8 Head
China	1 x 8 Head
New Zealand	1 x Single Head

The Pelt-O-Matic™ is designed and manufactured in Australia by Food Equipment Australia under licence from Meat and Livestock Australia. Worldwide Patents are pending.
